AI Rollout Kit for Small Teams

Five one-page worksheets to take a team from “people are trying ChatGPT” to approved tools, clear data rules and workflows that are actually used.

AI Man Jack • Jack Qian • Dallas—Fort Worth • aimanjack.com

AI MAN JACK

How to use this kit

1. Pick two or three tasks worth doing with AI (worksheet 1). Recurring, clear inputs, an output a person can check.
2. Approve the tools before anyone puts company work into them (worksheet 2).
3. Write down what never goes into an AI tool and who signs off on outputs (worksheet 3). Post it where the team can see it.
4. For each task, write the workflow on one page so a colleague could repeat it (worksheet 4).
5. After two weeks, review each workflow: keep, change or stop (worksheet 5).

Print the pages, or copy the text from the online versions at aimanjack.com/templates/. No AI tool is needed to fill them in.

Want help running this with your team?

Jack runs hands-on AI training for business teams, onsite in Dallas—Fort Worth or live online. Book a 20-minute call at aimanjack.com/book/ or email jack@aimanjack.com. Text: (469) 425-4142

STEP 1 OF 5

AI Use Case Discovery Worksheet

The four-question scoring sheet used to open every AI Man Jack session: list three weekly tasks, score them, pick the narrowest one that passes.

```
AI USE CASE DISCOVERY WORKSHEET
Fill this in per person. No AI tool needed. About 15 minutes.

STEP 1 — List three tasks you repeat every week
Not the hardest part of your job. The most repetitive.
  Task A: _____________________
  Task B: _____________________
  Task C: _____________________

STEP 2 — Score each task. Yes = 1, No = 0.
                                                        A    B    C
1. Does it happen often enough to matter?              [ ]  [ ]  [ ]
2. Can the input and the output be described clearly?  [ ]  [ ]  [ ]
3. Can a knowledgeable person check the result quickly? [ ]  [ ]  [ ]
4. Can it be tested without sensitive information?      [ ]  [ ]  [ ]
                                              TOTAL      __   __   __

A task that scores under 4 is not a first task. It may be a third.

STEP 3 — Of the tasks scoring 4, pick the NARROWEST
Good:  "Prepare a five-point meeting brief from these approved notes."
Bad:   "Run my department."

  My first task: _____________________

STEP 4 — Write the work instruction (five parts)
  Goal:              _____________________
  Approved source:   _____________________
  Constraints:       _____________________
  Output format:     _____________________
  Flag for a human:  _____________________

STEP 5 — Before anyone uses the output
  Who checks it?     _____________________
  Who signs off?     _____________________
  Review in 2 weeks: keep / change / stop
```

STEP 2 OF 5

AI Tool Approval Checklist

A one-page checklist for approving one AI tool for a team: what it will be used for, what the vendor does with your data, who pays, who has access, and what you tell everyone.

```
AI TOOL APPROVAL CHECKLIST
Goal: end "everyone uses their personal account" by approving ONE tool, in writing. One page per tool.

TOOL: _____     PLAN / TIER: _____     DATE: _____
REQUESTED BY: _____     DECISION OWNER: _____

1. WHAT IT IS FOR
   Three tasks it will be used for first:
   a. _____   b. _____   c. _____

2. DATA — read the vendor's current terms for THIS plan; do not rely on memory
   [ ] Does the vendor train its models on what we enter?        Yes / No / Opt-out available
   [ ] How long is our data retained?                            _____
   [ ] Where is it stored / processed?                           _____
   [ ] Can we delete it?                                         Yes / No
   [ ] Is there an admin console and an audit log?               Yes / No
   Link to the terms we read: _____   Date read: _____

3. ACCESS
   [ ] Company accounts, not personal ones
   [ ] Single sign-on or at least company email addresses
   [ ] Who gets a seat first: _____
   [ ] What happens to an account when someone leaves: _____

4. COST
   Per seat / month: _____   Seats: _____   Owner of the budget line: _____

5. BOUNDARIES
   [ ] The data boundaries one-pager exists and names this tool
   [ ] People know what must never go into it

6. DECISION
   [ ] Approved for: _____
   [ ] Approved with conditions: _____
   [ ] Not approved, because: _____
   Review again on: _____

7. TELL EVERYONE — one message, sent the same day
   "We have approved _____ for _____. Use your company account. Do not put _____ into it.
    Questions go to _____. Personal AI accounts are not for company work from _____."

This checklist organises a decision. It is not legal or security advice; involve counsel and IT for
regulated data.
```

STEP 3 OF 5

AI Data Boundaries One-Pager

One page every employee can read in two minutes: which AI tools are approved, what must never go into them, what needs a check first, and which outputs need a named person to sign off.

```
AI DATA BOUNDARIES — ONE PAGE
Everyone on the team should be able to read this in two minutes and answer three questions:
which tools, which information, who signs off.

TEAM: _____     OWNER OF THIS PAGE: _____     DATE: _____

1. APPROVED TOOLS — use these, with your company account
   _____      _____
   Anything else is not approved for company work. Ask: _____

2. NEVER GOES INTO AN AI TOOL
   [ ] Passwords, keys, access tokens
   [ ] Government ID numbers, bank and card details
   [ ] Health information about any person
   [ ] Customer data we hold under a contract or NDA that forbids it
   [ ] Unreleased financial results
   [ ] _____
   [ ] _____

3. CHECK FIRST — ask the owner of this page before using
   [ ] Customer names with anything about their account
   [ ] Employee information (HR, pay, performance)
   [ ] Contracts and legal correspondence
   [ ] _____

4. FINE TO USE
   [ ] Public information
   [ ] Our own published material
   [ ] Internal documents on the Approved Source Inventory marked "OK for AI tool"
   [ ] Anonymised data (names and identifiers removed BEFORE it goes in)

5. SIGN-OFF — a named person checks before the output is used
   Output                                  Who signs off
   Anything sent to a customer             _____
   Anything with a number in it            _____
   Anything that goes to leadership        _____
   _____                                   _____

6. IF SOMETHING WENT IN THAT SHOULD NOT HAVE
   Tell _____ the same day. No blame for reporting; the problem is not reporting.

REVIEW THIS PAGE ON: _____

This page records a team's working rules. It is not legal advice. For regulated data, have counsel
review it.
```

STEP 4 OF 5

AI Workflow One-Pager

Turn a one-off chat into a repeatable workflow on one page: trigger, inputs, steps, the instruction, who reviews, who owns it, and when it gets reviewed.

```
AI WORKFLOW ONE-PAGER
One page per workflow. If it does not fit on a page, it is two workflows.

NAME:        _____________________
OWNER:       _____________________   (one person, by name)
REVIEWER:    _____________________   (who checks the output before it is used)

1. TRIGGER — when does this run?
   _____________________   (e.g. "every Friday at 2pm", "after each customer call")

2. INPUTS — what goes in, and where it comes from
   Input: _____________________   Source: _____________________
   Input: _____________________   Source: _____________________
   Anything sensitive in these inputs?  [ ] No   [ ] Yes → stop, check the data boundaries first

3. STEPS
   1. _____________________   (person / AI)
   2. _____________________   (person / AI)
   3. _____________________   (person / AI)
   4. _____________________   (person / AI)

4. THE INSTRUCTION — five parts
   Goal:              _____________________
   Approved source:   _____________________
   Constraints:       _____________________
   Output format:     _____________________
   Flag for a human:  _____________________

5. REVIEW — what the reviewer checks, every time
   [ ] Every claim traces to the source
   [ ] Format followed
   [ ] Numbers match
   [ ] _____________________

6. WHERE THE OUTPUT GOES
   _____________________   (channel, folder, system — not "my chat history")

7. WHEN IT FAILS
   If the output is wrong:        _____________________
   If the tool is unavailable:    _____________________

FIRST REVIEW DATE: __________   Decision then:  keep / change / stop
```

STEP 5 OF 5

Two-Week AI Workflow Review

The review run two weeks after a workflow starts: was it used on real work, was it accurate enough, where did checking take too long — then one decision: keep, change or stop.

```
TWO-WEEK AI WORKFLOW REVIEW
Fifteen minutes, two weeks after a workflow starts. One sheet per workflow. Ends in one decision.

WORKFLOW: _____     OWNER: _____     REVIEW DATE: _____
STARTED ON: _____     REVIEWER DURING THESE TWO WEEKS: _____

1. WAS IT USED ON REAL WORK?
   Times it ran in two weeks:  _____     Times the task came up:  _____
   If it ran less than half the time, why?   _____

2. WAS THE OUTPUT ACCURATE ENOUGH TO USE?
   Used as it was:                _____ times
   Used after edits:              _____ times     Typical edit: _____
   Thrown away:                   _____ times     Why: _____

3. WHAT DID THE REVIEWER CATCH?
   _____
   _____
   Did anything wrong get past review?   [ ] No   [ ] Yes → what: _____

4. WHERE DID IT TAKE TOO LONG?
   [ ] Gathering the inputs     [ ] Running it     [ ] Checking the output     [ ] Fixing the output
   Note: _____

5. DID THE BOUNDARIES HOLD?
   [ ] Only approved tools were used
   [ ] Nothing off-limits went in
   [ ] Sign-off happened before the output was used

6. DECISION — tick one
   [ ] KEEP      as it is. Next review: _____
   [ ] CHANGE    what: _____   by whom: _____   re-review: _____
   [ ] STOP      because: _____

Attendance and enthusiasm are not measures. Count what ran, what was usable, and what review caught.
```
